This collage features a central image of a person in a blue shirt and purple pants walking on a path. Surrounding this central image are several smaller, semi-transparent images: a person in a white shirt, a landscape with a blue sky, a car, a building, and a person in a car. The images are arranged in a grid-like pattern with some overlapping.

Outdoor Furniture

Outdoor furniture is essential for creating a relaxing and enjoyable outdoor space. Whether you're looking for a dining table, lounge chair, or patio umbrella, there's something for everyone. Browse our collection of high-quality outdoor furniture and accessories today.

RESEARCH PROJECT

The collage features several key elements:

- Top Left:** A large, bold title "RESEARCH PROJECT" in a green, textured font.
- Top Right:** A photograph of a person in a white lab coat working in a laboratory setting.
- Middle Left:** A grid of four small images showing different types of plants or trees.
- Middle Right:** A large, detailed illustration of a human eye, showing the iris, pupil, and surrounding structures.
- Bottom Left:** A photograph of a person sitting on a bench, possibly conducting an experiment or observation.
- Bottom Center:** A stylized illustration of a person sitting on a bicycle, with a sun icon above them.
- Bottom Right:** A photograph of a person working at a computer workstation.
- Text Elements:** Various text boxes and labels are scattered throughout the collage, including "RESEARCH PROJECT" at the top, "ENVIRONMENTAL SCIENCE" in the middle, and "DATA ANALYSIS" at the bottom.

QUESTION

1. A patient with a long history of alcohol abuse presents with a 2-week history of weight loss, anorexia, and weakness. The patient has a history of chronic liver disease and is currently on a low-fat diet. The patient's physical examination is notable for a 2-cm, firm, nontender, palpable mass in the right upper quadrant of the abdomen. The patient's laboratory studies are as follows:

WBC	12,000/mm ³
Hgb	10 g/dL
Hct	30%
Platelets	150,000/mm ³
BUN	18 mg/dL
Cr	1.2 mg/dL
Alb	3.5 g/dL
AST	120 U/L
ALT	150 U/L
ALP	300 U/L
Gamma-GT	400 U/L

Which of the following is the most likely diagnosis?

- (A) Hepatic adenoma
- (B) Hepatic metastasis
- (C) Hepatic hemangioma
- (D) Hepatic lipoma
- (E) Hepatic carcinoma

ANSWER

(E) Hepatic carcinoma

The patient's history of alcohol abuse, weight loss, anorexia, and weakness, along with the physical examination finding of a firm, nontender, palpable mass in the right upper quadrant of the abdomen, are all suggestive of a hepatic mass. The patient's laboratory studies are also consistent with a hepatic mass, as evidenced by the elevated levels of AST, ALT, ALP, and gamma-GT.

The most likely diagnosis is hepatic carcinoma, which is a common cause of a hepatic mass in patients with a history of alcohol abuse. The patient's laboratory studies are also consistent with a hepatic mass, as evidenced by the elevated levels of AST, ALT, ALP, and gamma-GT.

- (A) Hepatic adenoma
- (B) Hepatic metastasis
- (C) Hepatic hemangioma
- (D) Hepatic lipoma
- (E) Hepatic carcinoma

EXPLANATION

The patient's history of alcohol abuse, weight loss, anorexia, and weakness, along with the physical examination finding of a firm, nontender, palpable mass in the right upper quadrant of the abdomen, are all suggestive of a hepatic mass. The patient's laboratory studies are also consistent with a hepatic mass, as evidenced by the elevated levels of AST, ALT, ALP, and gamma-GT.

The most likely diagnosis is hepatic carcinoma, which is a common cause of a hepatic mass in patients with a history of alcohol abuse. The patient's laboratory studies are also consistent with a hepatic mass, as evidenced by the elevated levels of AST, ALT, ALP, and gamma-GT.

The patient's laboratory studies are also consistent with a hepatic mass, as evidenced by the elevated levels of AST, ALT, ALP, and gamma-GT.

- (A) Hepatic adenoma
- (B) Hepatic metastasis
- (C) Hepatic hemangioma
- (D) Hepatic lipoma
- (E) Hepatic carcinoma
